

SQL Mastery Flashcards

Interactive Study Cards - 20 Concepts

What is a DBMS?

Database Management System: Software used to manage databases.

RDBMS vs DBMS

RDBMS uses relational tabular format. DBMS uses files.

DDL

Data Definition Language: CREATE, ALTER, DROP, TRUNCATE.

DML

Data Manipulation Language: INSERT, UPDATE, DELETE.

DQL

Data Query Language: SELECT. Retrieves data.

TCL

Transaction Control Language: COMMIT, ROLLBACK, SAVEPOINT.

DCL

Data Control Language: GRANT, REVOKE.

Primary Key

Uniquely identifies each row. Cannot be NULL.

Composite Key

Primary Key with two or more columns.

AUTO_INCREMENT

Automatically generates sequential numbers.

TRUNCATE vs DROP

TRUNCATE empties table. DROP removes table entirely.

INSERT IGNORE

Ignores duplicate key errors during insertion.

ON DUPLICATE KEY UPDATE

Updates existing row if duplicate key occurs.

NOT NULL

Column cannot have a NULL value.

UNIQUE

All values in a column are distinct.

CHECK Constraint

Values must satisfy a specific condition.

DEFAULT Constraint

Assigns a default value if none provided.

UPPER()

Converts string to uppercase.

SUBSTRING()

Extracts substring given start and length.

CONCAT()

Concatenates two or more strings.
